

## 2008 Race Tip # 13 – Center Crankshaft Gear Oiling

To insure adequate lubrication of the center crankshaft gears and bearings we recommend that you lubricate the center cavity prior to each race weekend.

- Remove the carburetors
- Fill a 10cc syringe with 10cc's of Polaris Racing 2 Stroke synthetic oil. Install a short length of small diameter hose over the end of the syringe and the other end of the hose on the center oil injection fitting located in the center of the crankcase on the intake side of the engine.
- Slowly force the lubricant into the fitting. Since the oil injection fitting is a check valve, it may take a small amount of pressure.
