**TIP # 11 2005 440 IQ - Reed Petal Replacement.**

Due to a material defect we have sent replacement reed petal kits to all Polaris racers. The new reeds can be identified by smaller print on the bar code label and a shinier black color on the reed petals.

To replace the reed petals, separate the reed cage from the outer housing, Use a small flat blade screwdriver to drive the center petal retainers outward. Use pliers to pull the petal retainers out of the reed cage and discard. Install the new reed petals, and petal retainers supplied in the kit.

**New Reed Petal packaging vs. old.**

**Removal of old reed petal using a screwdriver**

**Inserting a new reed petal.**
