

Race Tip #13 – Front Seat Mount

Remove seat.

Remove the existing rivet that attaches the front seat mounting bracket to the seat and replace it with rivet P/N 7621467. Use a die grinder to lightly grind the center rib of the seat to provide a flat surface for an additional rivet. Drill a 3/16" hole through the center of the plastic seat tab and through the seat mounting bracket. Install a 3/16" diameter rivet P/N 7621433 or equivalent as shown.

When remounting the seat, apply red loctite to the threads of the torx head screws and torque to 12 ft lbs.
